About US:

Smart Integral Technology is formed by a group of enthusiastic & next generation professionals combining their converged experience and knowledge of more than two decades. These experiences consist of various Information & Communication Technology systems from the multiple technology leaders around the world. We are a team of highly creative and naturally inspired by life individuals who work together to bring success stories for our clients. At **SIT**, we bring the latest & the best breed of Information and Communication Technology solutions for our customers to simplify their business communication and to offer them total end-to-end ICT solutions. Our objective is to provide complete peace of mind to our customers so that they can focus on their core business.

We are committed for our customers to provide the right solution for the best and reasonable prices. This is our single line objective rather than providing technology product boxes filling the space to solve the business challenges in ICT. We strongly believe that system integration requirement of the modern businesses is the **Smart** value and it is a key differentiator in our various propositions.

With highly skilled professionals of **SIT**, we provide the total Information Communication Technology Solutions with system integration services to our customers, through highly resourceful consultation, design to address our customer's needs that solve the business challenges.

Our expertise and integration services are providing tailor-made solutions for our customer that suits to their business needs in Enterprise Voice Communication, Data Communication , Video Communication, Software and digital transformation combined with value-added services such consultation, design, solution delivery and implementation and value added customer support services.

Vision:

We want to be the premier system integrator organization in the region. We are passionate about helping our customer businesses through innovative technologies to reach and maximize their business dreams. Our ambition is to be recognized as a most preferred system integrator across the middle east region. We strive to be the leader in delivering quality & values in our businesses which are the critical components of our corporate strategy. We want to be loved by our clients and staff by providing the conducive business environment. The ultimate goal of **SIT** is to be the most dynamic technology company by creating sustainable solutions which are essential to better, revolutionary and innovative humanity.

Mission:

Our mission is to make technology an asset for your business, not a problem. We will achieve this by providing the state-of-the-art and best in class reliable Information Communication Technology Solutions for the customers. We will not bring our customers in the downtime during the middle of the business because it is "a better time for us". We strive to make technology integrate seamlessly with your business so that your business can grow. We make sure to evolve in every aspect of our business which will make a positive difference in our customers' lives.

Quality policy:

The goal of SIT is to provide high-quality services, which perfectly meet the requirements of our customers, and even exceed expectations. Our team's extended and successful experience of the IT market presence indicates that customers require products and services of the top quality level at reasonable costs. We are taking the responsibility to provide such products and services. We believe this the best way which leads us to secure a stable position in the market. Continuous improvement of quality offerings is the basic strategy for our business development and success. We know that quality management is not a short-term campaign, but it's a steady commitment. Our leadership assumes the responsibility for the quality policy realization and arrangement of necessary conditions for that including resources required. We are committed to our customers & responsible to the society to keep the clean and quality business practices.

Products & Services:

Technology surrounds us today and tomorrow technology will rule us. We don't always think about where the technology comes from or how it got to us. Our selected product ecosystem has a huge impact on everything which we offer to our customers. We're bridging the gap between the world's largest industry and a future where technology can be used to solve our hardest problems.

Enterprise Communication solutions:

Today Enterprise Communication term is describing the integration of a variety of services such as voice communications, instant messaging, presence status, mobility & voice mail, multimedia contact center, conference, application Integration and much more, which is an **Integral** part of network communication.
